atmosfair and German ProfEC cooperate

Wilhelmshaven 28.01.2008: German ProfEC GmbH becomes Cooperation-associate of the Berlin atmosfair gGmbH. Andreas Jansen, Managing Director of German ProfEC, in the future will be representing atmosfair in Latin America and the Caribbean. He will conceive and look for climate protection projects, which implement sustainable energy and energy efficiency technologies in the region with the atmosfair support. Climate protection, sustainability and benefits for the local population are in the center of the matter and have equal importance.

"I am very pleased with this cooperation. The atmosfair gGmbH is an innovative company that meets the maxim of German ProfEC: the link between economy, social interests and ecology", according to Andreas Jansen, Managing Director of German ProfEC.

The cooperation is based on the network, which German ProfEC has at its disposal all above Latin America. This network enables projects in the area of sustainable energy and energy-efficiency, which can be considered for the CDM Gold Standard certification. Projects in typical tourism destination countries like the Dominican Republic and Costa Rica have particular attention at the moment.

About atmosfair and German ProfEC:

The **atmosfair gGmbH** (www.atmosfair.org) is a non-profit-oriented gGmbH dedicated to the climate protection. Consequently atmosfair puts forward a unique offer for people, for which climate protection is as well important. With the help of an emission-calculator one can determine how much greenhouse gases are produced by a flight-trip. The atmosfair client pays so much that the same volume of climate damaging gases can be avoided at other place, which has a comparable climate-effect as the emissions from the airplane. These contributions will be invested in solar energy, hydro, biomass, wind energy or in energy-savings projects in developing and threshold countries. And it is of utmost important that those sustainable energy sources have a positive benefit to the local population as well. Internationally acknowledged control-mechanisms and organizations make sure, that the standards are maintained and the contributions to these projects reach their destination.

German ProfEC GmbH (www.german-profec.com) advises and looks after companies in the area of sustainable energy sources and sustainability. The core competences are the optimal employment of wind energy and biomass energy as well as the mediator function between project management units, development organizations, investors and the indigent persons.

"Sustainability is an essential aspect for a more balanced distribution of prosperity and welfare as thereby social, economic and ecological aspects are considered appropriately and harmonized along with each other", according to the philosophy of German ProfEC.
